

PRD take home

i) Goal is to make a website that gives you exact steps to build a product.

is needs to generate a requirement document

ii) then system design doc

iii) create a sprint plan to make this system design.

* Will be used by large organizations, so I'll consider something like Amazon will use this service to plan out their products.

Imp

- * Needs to handle huge scale.
- * Concurrency
- * Load balancing
- * UI smoothness

T.L.T.L.

* INITIATIVE.

Requirement document needs to be VERY comprehensive and packed with minute details.

Requirement document needs to understand product fully. first before making the doc

1) Ensure full context is provided.

Ask users for followups in whatever ambiguity in their requirements?

→ I could generate a set of questions to flesh out the requirement by the users first before just making the document blind.

→ To do that, I need to know what criteria & questions to ask them ?

- * What do product managers want from a requirement doc ?
- * What category does this seg land in ?

Use tagging method to classify prompts :

1) What user intends / trying to solve ?

2) Who are our customers

3) Platforms

4) Domain.

* Once I have this knowledge from a UM call to

' a classifier in JSON out.

I can use the ~~Atlassian~~
PRD template ?

* Can add option to shared
reviews/edits by the whole
project team integrated
in the 1st step.

(sort of like a PR message)

* Add option to export PDF,
or summarize into a PPT for
shareholders & easy understanding

* Can use a RAG chatbot
to answer PRD questions.

Other things PRD can highlight:

1) benchmark against

competitors
2) market trends.
3) Customer profile, problems
↳ needs.
↳ can be added as ☒ boxes.

* Needs JIRA / DevOps / GitHub integration for quick ticketing.

Full list of questions can be compressed into main questions and asked as a form

☒ detailed generation mode
(this will ask questions, else user can directly get a PRD)

Normal mode will have a basic PRD for everyday use

↳ detailed mode will be

for enterprises.

PRD structure :
(if detailed)

PRD structure (if
